

Jan Rymarski

Digital Designer

I'm a Digital Designer with a passion for combining visual design, interaction, and technology. I work across branding, UI/UX, editorial design, and front-end development, turning ideas into clear and engaging digital experiences. I enjoy experimenting with different tools and techniques, from Figma and Adobe Creative Suite to React and Blender, and I'm always looking for new ways to bring design and code together.

EXPERIENCE

04

2026 - Present

Part-time Bartender

Worked as a bartender in a fast-paced environment, developing strong communication and people skills while staying calm and efficient under pressure. Learned to multitask, manage busy situations, work effectively as part of a team, and provide friendly service to a wide range of people.

2023 - 2023

Internship at Impress

During my internship at Impress, I gained experience working in a professional design environment and on projects for real clients. I worked on a variety of visual design tasks, developing concepts and turning them into final designs while working within existing brand identities and project requirements.

The internship taught me how to work with deadlines, communicate within a team, handle feedback, and adapt my designs throughout the creative process.

SKILLS

05
